

Operasi – operasi pada Proses :

- Penciptaan proses (create a process).
- Penghancuran/terminasi proses (destroy a process).
- Penundaan proses (suspend a process).
- Pelanjutan kembali proses (resume a process).
- Mem-block proses.
- Membangunkan proses.
- Menjadwalkan proses.
- Komunikasi Antar Proses.

Nah, dalam praktikum kali ini kita akan mengimplementasikan beberapa operasi – operasi pada proses dengan menggunakan terminal dan sisanya bisa kalian explore sendiri ya.

Perintah-perintah proses di linux :

- Instruksi ps (process status) digunakan untuk melihat kondisi proses yang ada. PID adalah Nomor Identitas Proses, TTY adalah nama terminal dimana proses tersebut aktif, STAT berisi S (Sleeping) dan R (Running), COMMAND merupakan instruksi yang digunakan.

\$ ps

```
cgeatz@cgeatz-pc:~$ ps
  PID TTY          TIME CMD
 2170 pts/0    00:00:00 bash
 2225 pts/0    00:00:00 ps
cgeatz@cgeatz-pc:~$
```

- Untuk melihat faktor/elemen lainnya, gunakan option -u (user). %CPU adalah presentasi CPU time yang digunakan oleh proses tersebut, %MEM adalah presentasi system memori yang digunakan proses, SIZE adalah jumlah memori yang digunakan, RSS (Real System Storage) adalah jumlah memori yang digunakan, START adalah kapan proses tersebut diaktifkan.

\$ ps u

```
cgeatz@cgeatz-pc:~$ ps u
USER      PID %CPU %MEM    VSZ   RSS TTY      STAT START   TIME COMMAND
cgeatz    2170  0.6  0.1   7248  3636 pts/0    Ss   16:54   0:00 bash
cgeatz    2256  0.0  0.0   4928  1148 pts/0    R+   16:55   0:00 ps u
cgeatz@cgeatz-pc:~$
```

- Mencari proses yang spesifik untuk pemakai.

\$ ps -u <user>

```
cgeatz@cgeatz-pc:~$ ps -u cgeatz
  PID TTY          TIME CMD
 1643 ?           00:00:00 gnome-keyring-d
 1654 ?           00:00:00 gnome-session
 1689 ?           00:00:00 ssh-agent
 1692 ?           00:00:00 dbus-launch
 1693 ?           00:00:01 dbus-daemon
 1704 ?           00:00:01 gnome-settings-
 1711 ?           00:00:00 gvfsd
 1713 ?           00:00:00 gvfs-fuse-daemo
 1721 ?           00:00:14 compiz
 1724 ?           00:00:00 gconfd-2
 1731 ?           00:00:00 gvfsd-metadata
 1732 ?           00:00:00 syndaemon
```

- Mencari proses lainnya gunakan opsi a, au dan aux

\$ ps -a

\$ ps -au

\$ ps -aux

```
cgeatz@cgeatz-pc:~$ ps aux
USER      PID %CPU %MEM    VSZ   RSS TTY      STAT START   TIME COMMAND
root         1  0.1  0.1   3520  1976 ?        Ss   08:22   0:01 /sbin/init
root         2  0.0  0.0      0     0 ?        S    08:22   0:00 [kthreadd]
root         3  0.0  0.0      0     0 ?        S    08:22   0:00 [ksoftirqd/0]
root         4  0.0  0.0      0     0 ?        S    08:22   0:00 [kworker/0:0]
root         6  0.0  0.0      0     0 ?        S    08:22   0:00 [migration/0]
root         7  0.0  0.0      0     0 ?        S    08:22   0:00 [watchdog/0]
root         8  0.0  0.0      0     0 ?        S    08:22   0:00 [migration/1]
```

- Melihat proses yang sedang berjalan

\$ top

```
top - 09:08:25 up 46 min, 1 user, load average: 0.95, 0.71, 0.63
