

STUDI KASUS 9 (new)

Given the following information, produce an ERD – based on Crowfoot model – that can be implemented. Make sure to include all appropriate entities, relationships , connectivities, and cardinalities.

- EverFail Company is in the quick oil change dan lube business. Although customers bring in their cars for what is described as ‘Quick oil Change” , EverFail also replace windshield wipers , oil filters, and air filters, subject to customer approval. The invoice contain the charges of the oil used and all parts used, and a standard labor charge. When the invoice is presented, customers pay cash , use credit card , or write a check. EverFail does not extend credit . Ever Fail’s database is to be designed to keep track of all components in all transactions.
- Given the high part usage of the business operations, EverFail must maintain careful control of its parts (oil, wipers, oil filters, air filters) inventory. Therefore , if parts reach minimum on-hand Quantity, the parts in low supply must be reordered from an appropriate vendor. EverFail maintains a vendor List, which contains both the vendors actually used and the potential vendors.
- Periodically , EverFail mails updates to customers, based on the date of the car’s Service. everFail also tracks each customer’s car mileage.

- a. Draw ERD (Chen Diagram)
- b. Draw TRD (crow Foot Diagram)
